MVP
Quick and Dirty

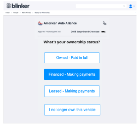

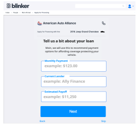

- This is just an example with the URL, header and framed in consumer view.
- The sales agent will click "Apply for Financing" from the Mission Control consumer profile page. This will open up this view in the existing window.
- Next.... Build new consumer views for this work flow to confirm and collect the missing information.

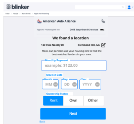

Need to decide. use existing **loan_applicants** table or create a new one. Then go back later to make it backwards compatible.

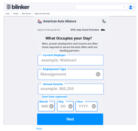

- These views will use the same responsive designs from our previous consumer view work flows (for protection plans). We may, in later versions, even use some of the existing views to confirm or edit information.
- First view. Is to check to see if they are current making payments.
  - If any option other than "Financed - Making payments" OR "Leased - making payments" is selected,
    - then we will alert the sales agent (user) with this simple message "Only vehicles that are currently financed or leased are eligible for a refinanced loan"
- We will be building a payload request that will be stored in the **api_responses** table with a **subject_type** of **LoanApplicantsExternal** and will attach by **subject_id** to **loan_applicants_external.id**
  - All variables confirmed, collected and sent will be stored in the **api_responses.request** field
- Ownership Status inputted value (ENUM) maps to **vehicles.context.ownership_status** where a new JSONB field "context" needs to be added to the vehicles table and then the key (ownership_status) -> value pair stored.

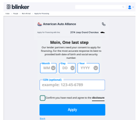

- **Monthly Payment** inputted value (float) maps to **application.quotes_customer_reported_payment**
- **Current Lender** inputted value (text) maps to **application.current_lienholder**
- **Estimate Payoff** inputted value (float) maps to **application.quotes_customer_reported_payoff**
- None of these values are required. Therefore the user can proceed without entering the values by
  - clicking skip OR
  - clicking next

- **Monthly Payment** inputted value (float) maps to **application.applicant_payment**
- **Move In Date** - Month, Day and Year inputted values need to be converted to the number of months between the inputted date and today. Round up to the nearest integer. Then the calculated value (integer) maps to **application.applicant_months**
- **Ownership Status** inputted value (ENUM) maps to **application.applicant_own_rent** with values of OWN, RENT OR OTHER
- **Address** - the address attached to this customer (user) will be mapped to **application.applicant_*** where * is city, state, zip, address
- ALL of these values are required. Therefore the user can NOT proceed without entering the values

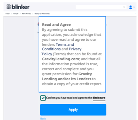

- **Employer** inputted value (TEXT) maps to **application.applicant_employer_employer**
- **Employment Type** inputted value (ENUM) maps to **application.applicant_employer_employment_type** with values of AT HOME, DISABILITY, EMPLOYED, EXECUTIVE, LABOURER, MANAGEMENT, MILITARY, OFFICE STAFF, OTHER, PRODUCTION, PROFESSIONAL, RETIRED, RETIRED - MILITARY, SALES, SELF - EMPLOYED, SIMI PROFESSIONAL, SERVICE, SOCIAL SECURITY, STUDENT, TRADES, UNEMPLOYED
- **Annual Income** inputted value (integer) maps to **application.applicant_employer_income** and **application.applicant_employer_income_frequency** defaults to the value "Annually"
- **Start Date** input values Month, Day and Year need to be converted to the number of months between the inputted date and today. Round up to the nearest integer. Then the calculated value (integer) maps to **application.applicant_employer_years and application.applicant_employer_months**
- ALL but Start Date are required. Therefore the user can NOT proceed without entering the values

- **DOB** - input values Month, Day and Year need to be converted to the number of months between the inputted date and today. Round up to the nearest integer. Then the calculated value (integer) maps to **application.applicant_dob.** Then we store the DOB date in **users.dob**
- **SSN** - input value (integer) maps to **application.applicant_ssn**. Then we store the SSN in **users.ssn**
- **Disclosure** - the disclosure must be clicked, then a "modal" with the "Read and Agree" is presented to the user -> Sales Agent for them to read to the consumer. The Agent must click the check box to "Confirm" consent and agreement to the terms. This input value (BOOLEAN) of a checked "Confirm" is mapped to **application.applicant_pp** = 1 and **application.applicant_tcpa** = 1

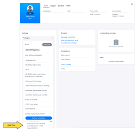

This is the full disclosure text that needs to be presented to the consumer verbally under the "Read and Agree" title of the Modal above.

Read and Agree

By agreeing to submit this application, you acknowledge that you have read and agree to our lenders **Terms and Conditions** and **Privacy Policy** (Terms) that can be found at **GravityLending.com**; and that all the information provided is true, correct and complete and you grant permission for Blinker, **Gravity Lending and/or its Lenders** to obtain a copy of your credit report.

By agreeing, you consent to receive customer care, 2FA, and 2-way conversational text messages from Blinker, its partners and Gravity Lending at the number provided, including messages sent by autodialer. - **Applied** - date and time shown in organization configurations timezone of when the application was submitted to the API. This value is stored in **loan_applicants_external.created_at**
- **Status** - default will be PENDING, stored in **loan_applicants_external.status**
  - **Future release** - we will allow the sales agent to see offers and integrate those into the embedded experience. **Disclosure** - the disclosure must be clicked, then a "modal" with the "Read and Agree" is presented to the user -> Sales Agent for them to read to the consumer. The Agent must click the check box to "Confirm" consent and agreement to the terms. This input value (BOOLEAN) of a checked "Confirm" is mapped to **application.applicant_pp** = 1
