

AOD-On Monthly Payment Formula

Inputs

- A = sold-or-price-principal
- APR = annual percentage rate (as a decimal, e.g. 7% = 0.07)
- T = loan term in months

Formula

$$\text{AOD-On Monthly Payment} = A \times \frac{\frac{APR}{12}}{1 - \left(\frac{1}{1 + \frac{APR}{12}}\right)^{T}}$$

Same Formula — Simplified Variable Form

$$\text{Monthly AOD-On} = A \times \frac{r}{1 - (1+r)^{-T}}$$

Spreadsheet Version (Excel / Google Sheets)

Assuming:

- A = sold-or-price
- APR = 7.5% (as decimal)
- T = 72 months (6 years)

Example (from your numbers)

- A = sold-or-$ 23,979
- APR = 7% = 0.07
- T = 84 months

$$= 23{,}979 \times \frac{0.0073}{1 - (1.0073)^{-84}} = \$33.40/\text{month}$$
